LABTEMP[®] 60 HIGH RANGE SURFACE TEMPERATURE INDICATOR

Biosynergy's LabTemp[®] 60 indicator is a high range general purpose temperature indicator designed to accurately monitor temperatures between 41-61°C. LabTemp[®] 60 like Biosynergy's other temperature indicators is disposable, although in many applications it can be affixed to an object and used for up to 1-1/2 years.

LabTemp[®] 60 is thin, flexible and adhesive backed and therefore can be adhered to all types of materials and surfaces. These indicators can be used in incubators, water baths and even centrifuges. **They are ideal for measuring temperature during laboratory procedures, particularly on test tubes, beakers, and other labware when the use of a standard mercury or electronic thermometer is impractical.** LabTemp[®] 60 is also ideal for use in storing volatile materials to provide a warning that such materials may be reaching unsafe temperatures.

LabTemp[®] 60 temperature indicators are available in bulk quantities only. Biosynergy also manufactures additional LabTemp[®] indicators in lower temperature ranges. If you would like to try a free sample or would like additional information about our LabTemp[®] 60 indicator, simply call toll-free, 800-255-5274 or email us at biosynergy@att.net.
